/token - POST

Try it ▶

This operation is used to create an access token which can then be used to authorize and authenticate towards the other end-points of the API.

Request

POST <https://sandbox.momodeveloper.mtn.co.rw/collection/token/>

Request headers

Name	Required	Type	Description
Authorization	true	string	Basic authentication header contain ID and API key. Should be sent in as encoded.

Response: 200 OK

OK

application/json

TokenPost200ApplicationJsonResponse

Name	Required	Type	Description
access_token	false	string	A JWT token which can be used against the other API end-point the token follows the JWT stanc jwt.io for an example). This is th should be sent in in the Authori: when calling the other API end-
token_type	false	string	The token type.
expires_in	false	integer	The validity time in seconds of t

default

DEFAULT - JSON

Copy

```
{
  "access_token": "string",
  "token_type": "string",
  "expires_in": 0
}
```

Response: 401 Unauthorized

Unauthorized

application/json

TokenPost401ApplicationJsonResponse

Name	Required	Type	Description
error	false	string	An error code.

default

DEFAULT - JSON

Copy

```
{  
  "error": "string"  
}
```

Response: 500 Internal Server Error

Error
